

# GREENROCK

DER SALZWASSER STROMSPEICHER

## The GREENROCK M-Line Energy Storage System – the world's safest battery as Plug&Play version!

The GREENROCK Energy Storage System is available both unclothed and in a very attractive and compact battery housing. The system is fully pre-installed and very simple to install as a plug and play version. **The GREENROCK Storage System is a cost-effective storage solution which is both safe and environmentally friendly.**

## Safe, environmentally friendly and maintenance-free!

The American company Aquion Energy developed the world's most environmentally friendly and safe battery with the patented Aqueous Hybrid Ion (AHI™) technology.

Aquion batteries are sealed energy storage systems, based on the unique saltwater electrolyte. For this, abundant, non-toxic materials and modern, cost-saving manufacturing techniques are used.

These saltwater batteries are absolutely maintenance-free and optimized for daily deep discharge. Frequent charging and discharging cycles do not affect the life of the battery.

## Scalable and flexible

The GREENROCK storage system can be adapted according to your requirements as a scalable modular system so it can provide Energy up to several MWh.
